1. Overview

OUR DECK IS

Slightly Different

Fits 68% of the weighted competitor patterns (8 fit, 3 different).

Overall verdict: slightly different. Our deck follows the competitors in format, layer use and its gameplay-heavy mix, but it has no feature image (used by 2 of 2 competitors), shows a metagame screen at position 5 where competitors show gameplay, and runs 7 screenshots against their 5 to 6. With only 2 competitors in the sample, treat these gaps as signals rather than firm rules.

Key points to optimise, most important first

1. Replace the metagame screen at position 5 with a gameplay screenshot, since both competitors (100% of 2 screenshots) show gameplay there, and move the metagame screen earlier or later in the deck.
2. Add at least one feature image after the gameplay screenshots, because both competitors use one (at positions 2, 3 and 6) and we have none.
3. Cut the deck from 7 to 5 or 6 screenshots to match the competitors (median 5.5), for example by merging or dropping the second metagame screen or the extra gameplay shot at position 7.

2. Patterns across competitors

Computed from 18 of 18 screenshots in the batch. A **pattern** holds for (nearly) every competitor; a **partial pattern** for at least half of them.

This sample is very small: only 2 competitors (Archero 2 and Capybara Go) and 11 screenshots, so treat every pattern as a hint, not a rule. Both decks are short, 5 to 6 screenshots (median 5.5), and every image is portrait. Both games put a marketing layer on 100% of their screenshots. Most images (73%) are a full screenshot with a small layer, and the other 27% are full-screen art (title / loading style). Gameplay is the backbone: it appears in both decks (6 images, positions 1 to 5), and both games show gameplay at position 5. Both games also use feature images (3 images, at positions 2, 3 and 6), and in both decks gameplay comes before the feature image. Background masks sit at the bottom 90% of the time. Layer colours lean warm (orange 27% and yellow 27% of layer colours), and text is mostly white (48%).

Order (the sequence of screen types)

Our deck	Pattern	Evidence	Ours
[X] different	**Position 5 shows Gameplay** (pattern)	100% of 2 competitor screenshots at position 5	ours shows Metagame
n/a	**Gameplay comes before Feature image** (pattern)	in all 2 competitor decks that have both	our deck does not have both

Content (which screen types are used)

Our deck	Pattern	Evidence	Ours
[V] fits	**Uses Gameplay** (pattern)	2 of 2 competitors, at positions 1, 2, 3, 4, 5	we use it too
[X] different	**Uses Feature image** (pattern)	2 of 2 competitors, at positions 2, 3, 6	we have no Feature image
[V] fits	**Uses Metagame** (partial pattern)	1 of 2 competitors, at positions 4	we use it too
[V] fits	**Uses Title image** (partial pattern)	1 of 2 competitors, at positions 1	we use it too

Marketing layer

Our deck	Pattern	Evidence	Ours
[V] fits	**A marketing layer on the screenshots** (pattern)	100% of competitor screenshots	ours: 100% of our screenshots
[V] fits	**Layout: full screenshot, small layer** (partial pattern)	73% of competitor screenshots	ours: full screenshot, small layer too

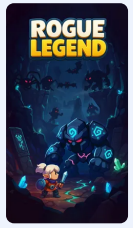

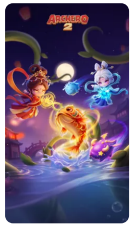

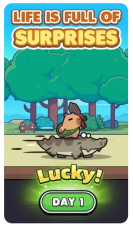

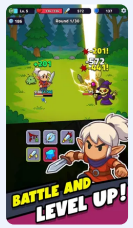

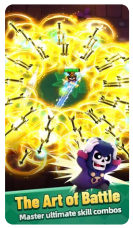

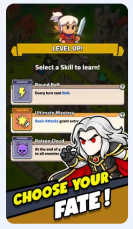

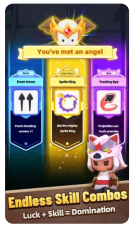

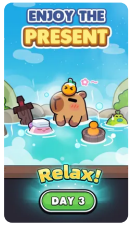

Our deck	Pattern	Evidence	Ours
[V] fits	**Background mask position: bottom** (pattern)	90% of competitor screenshots	ours: bottom too
[V] fits	**Marketing layer colours: mostly orange and yellow** (pattern)	11 of 11 competitor layers use one of them (orange 27%, yellow 27% of layer colours)	ours: mostly blue and yellow

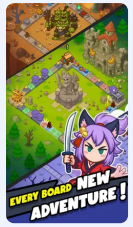

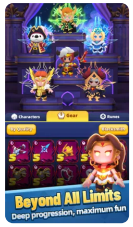

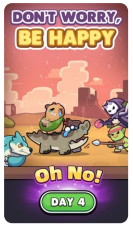

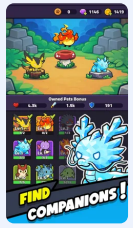

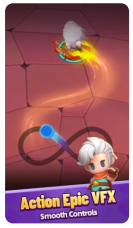

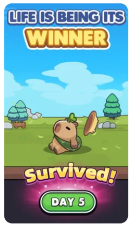

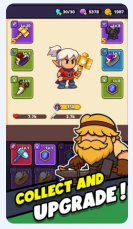

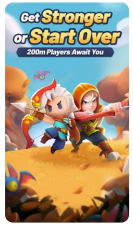

Format

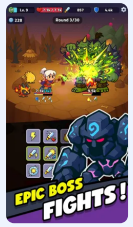

Our deck	Pattern	Evidence	Ours
[V] fits	**Image orientation: portrait** (pattern)	100% of competitor screenshots	ours: portrait too
[X] different	**Deck length 5 to 6 screenshots** (pattern)	median 5.5	ours has 7

3. Position by position

Row N shows every game's Nth Google Play screenshot: ours first, then each competitor. The (i) button shows the full analysis.

#	Rogue Legend (ours)	Archero 2	Capybara Go	How ours compares
1	 Title image / Title screen *"ROGUE LEGEND"*	 Title image / Title screen *"ARCHERO 2"*	 Gameplay / Travel exploration *"LIFE IS FULL OF SURPRISES"*	following Title image is used at position 1 by 50% of competitors (most common: Gameplay, 50%)
2	 Gameplay / Battle *"BATTLE AND LEVEL UP!"*	 Gameplay / Battle *"The Art of Battle"*	 Feature image / Character showcase *"LIVING IS FORTUNE"*	following Gameplay is used at position 2 by 50% of competitors (most common: Feature image, 50%); layout "screenshot with a large layer"; competitors here mostly use "full screenshot, small layer"; mask colour black; for Gameplay competitors mostly use green or grey
3	 Gameplay / Skill select *"CHOOSE YOUR FATE !"*	 Gameplay / Skill select *"Endless Skill Combos"*	 Feature image / Feature callout *"ENJOY THE PRESENT"*	following Gameplay is used at position 3 by 50% of competitors (most common: Feature image, 50%); mask colour blue; for Gameplay competitors mostly use green or grey

#	Rogue Legend (ours)	Archero 2	Capybara Go	How ours compares
4	 **Gameplay / Board (dice)** *"EVERY BOARD NEW ADVENTURE !"*	 **Metagame / Inventory** *"Beyond All Limits"*	 **Gameplay / Defeat** *"DON'T WORRY, BE HAPPY"*	**following** Gameplay is used at position 4 by 50% of competitors (most common: Gameplay, 50%); layout "screenshot with a large layer"; competitors here mostly use "full screenshot, small layer"; mask colour blue; for Gameplay competitors mostly use green or grey
5	 **Metagame / Pets** *"FIND COMPANIONS!"*	 **Gameplay / Travel exploration** *"Action Epic VFX"*	 **Gameplay / Victory** *"LIFE IS BEING ITS WINNER"*	**slightly different** competitors mostly show Gameplay here (100%); Metagame appears at a neighbouring position

11		not analysed (tablet-shaped)		
12		not analysed (tablet-shaped)		

4. Recommendations

Only two competitors were analysed, so these patterns are hints rather than rules. The deck drops from 7 to 6 screenshots, which matches the competitors' 5 to 6. It opens with our title screen, as Archero 2 does. Positions 2 and 3 are gameplay: first our most striking screen, the boss fight, then the skill pick that both competitors use. Our one metagame screen, gear, sits at position 4, where Archero 2 places its metagame screen. Position 5 is the board-and-dice screen, because both competitors show gameplay there. It is recaptured as one full screenshot with a small layer instead of three stacked slices. The deck ends with our first feature image, placed after the gameplay as both competitors do. It is built only from existing character art, each character in a pose already used in our current screenshots. The bottom masks change from mostly blue to warm orange and yellow, to match the competitors' colours and to stand out against our cool blue game art.

#	Screen	Source	Headline
1	Title image / Title screen	keep our current position 1	**ROGUE LEGEND**
2	Gameplay / Boss	keep our current position 7	**EPIC BOSS FIGHTS!**
3	Gameplay / Skill select	keep our current position 3	**CHOOSE YOUR FATE!**
4	Metagame / Gear	keep our current position 6	**COLLECT AND UPGRADE!**
5	Gameplay / Board (dice)	recapture our position 4	**EVERY ROLL, NEW ADVENTURE!**
6	Feature image / Character showcase	new capture	**RISE AS A LEGEND**

Position 1: Title image / Title screen

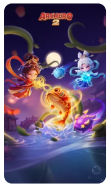

Source	keep our current position 1
Screen to capture	The in-game title screen art: the white-haired elf hero with sword and shield facing the stone golem with glowing cyan runes in the dark blue cavern, with red-eyed monsters on the ledges above and the ROGUE LEGEND logo at the top (portrait)
Action	The hero stands ready with sword drawn, facing the rune-covered golem
Atmosphere	Dark, adventurous and slightly menacing, but cute and stylised
Main colours	dark navy #0e1e3a, deep indigo #1c3358, glowing cyan #3ee6f0, golden yellow #f5c018, orange #e07a2a
Layout	full screenshot, small layer
Background mask	none (the logo sits directly on the art), none, none

Text	Role	Colour	Outline	Font style	Size	Position
ROGUE LEGEND	headline	white #ffffff (ROGUE) and golden yellow #f5c018 (LEGEND)	dark navy #1c3a5a with a soft glow	heavy rounded sans, bold 3D logo	huge	top

- **Extra element:** ROGUE LEGEND game logo, at top centre, pose n/a, white, golden yellow, dark navy outline

Why: Follows Archero 2, which puts a title image at position 1 (1 of 2 competitors). Our key art is strong and shows the brand and the fantasy straight away.

Competitor examples:

Title image / Title screen: "ARCHERO 2"

Archero 2 #1

Position 2: Gameplay / Boss

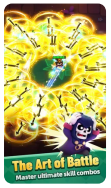

Source	keep our current position 7
Screen to capture	A boss round in a run: the HUD shows Round 3/30, and the hero blasts the giant green ogre boss with the spiked club on the sandy sunset plateau, with the skill tile grid below (portrait)
Action	The hero unleashes a charged attack on the ogre boss; explosion sparks and fire hit the boss
Atmosphere	Energetic, cartoony and dramatic boss fight at sunset
Main colours	orange sand #c9843a, dark purple sky #3b2a4d, green ogre #7bbf3a, bright yellow #f5e94a, dark navy #1e2438
Layout	full screenshot, small layer
Background mask	diagonal band with an impact burst behind the headline, warm orange #f08a2a band with a pale yellow burst #f7e9a0, bottom

Text	Role	Colour	Outline	Font style	Size	Position
EPIC BOSS FIGHTS!	headline	yellow #f7e01a (EPIC BOSS) and white #ffffff (FIGHTS!)	black #000000 with a drop shadow	heavy italic sans, tilted, outlined	huge	bottom
Smash giants across 30 rounds	subheadline	white #ffffff	dark brown #3a2410	heavy rounded sans, bold italic	medium	bottom

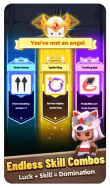

- **Extra element:** dark blue stone golem boss with glowing red eyes, cyan runes and pink cracks, at bottom right, rising above the band, pose front-facing, hunched, looming toward the viewer, dark navy, cyan, red, pink, white outline

Why: Follows the pattern of showing gameplay right after the title (Archero 2 shows a battle at position 2). This is our most action-packed full-screen gameplay capture, so it moves up from position 7. The mask changes from purple to warm orange to match the competitors' orange and yellow layers.

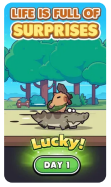

Competitor examples:

Gameplay / Battle: "The Art of Battle"
Archero 2 #2

Gameplay / Skill select: "Endless Skill Combos"
Archero 2 #3

Gameplay / Travel exploration: "LIFE IS FULL OF SURPRISES"
Capybara Go #1

Position 3: Gameplay / Skill select

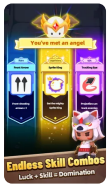

Source	keep our current position 3
Screen to capture	The level-up popup during a run: the gold LEVEL UP! banner, 'Select a Skill to learn!' and three skill cards (Common Round Bolt, Legendary Ultimate Mastery, Common Poison Cloud) over the darkened tile board (portrait)
Action	The player has levelled up mid-run and is choosing one of three skills
Atmosphere	Cheerful, cartoony and rewarding
Main colours	dark green #3f5a2e, cream #efe0c8, gold #f2c02a, purple-grey #6b6a8f, orange #f0a44a
Layout	full screenshot, small layer
Background mask	diagonal band, golden yellow #f2b72a over a dark brown underband #4a3420, bottom

Text	Role	Colour	Outline	Font style	Size	Position
CHOOSE YOUR FATE!	headline	yellow #f7f11a and white #ffffff	black #000000	heavy italic sans, 3D block, outlined	huge	bottom
Stack skills, build wild combos	subheadline	white #ffffff	dark brown #3a2a10	heavy rounded sans, bold italic	medium	bottom

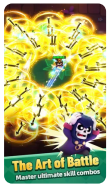

- **Extra element:** white-haired dark knight villain in black and gold armour with a red cape, at bottom right, over the skill cards and the band, pose leaning forward, reaching out with a clawed hand, menacing stare, white, black, red, gold

Why: Follows Archero 2, which shows skill select at position 3. This screen sells the roguelike build hook. We keep it and change the mask from slate blue to warm gold.

Competitor examples:

Gameplay / Skill select: "Endless Skill Combos"
Archero 2 #3

Gameplay / Battle: "The Art of Battle"
Archero 2 #2

Gameplay / Defeat: "DON'T WORRY, BE HAPPY"
Capybara Go #4

Position 4: Metagame / Gear

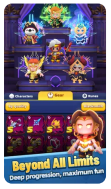

Source	keep our current position 6
Screen to capture	The equipment screen: the hero in the centre, six equipped gear slots with levels and rarity marks, the power/HP/attack stats bar and the inventory below (portrait)
Action	The player manages and upgrades the hero's gear
Atmosphere	Cheerful, cartoony and casual
Main colours	cream #f3e6cf, purple #8a4fc7, green #7fb43a, golden yellow #f5b924, dark plum #3b2f46
Layout	full screenshot, small layer
Background mask	band, warm orange #e8832a over a dark plum underband #3b2f46, bottom

Text	Role	Colour	Outline	Font style	Size	Position
COLLECT AND UPGRADE!	headline	yellow #f7f704 (COLLECT AND) and white #ffffff (UPGRADE!)	black #000000	heavy rounded sans, bold italic, tilted	huge	bottom
Forge gear, grow unstoppable	subheadline	white #ffffff	dark plum #3b2f46	heavy rounded sans, bold italic	medium	bottom

- **Extra element:** bearded blacksmith with golden hair hammering a glowing bar on an anvil, at bottom right, over the inventory area, pose leaning forward, swinging the hammer down, facing left, golden yellow, brown, grey, cream

Why: Follows Archero 2, which puts a metagame screen (gear) at position 4. This is the only metagame screen we keep. The pets screen is dropped to shorten the deck, and its dragon moves to the feature image.

Competitor examples:

Metagame / Inventory: "Beyond All Limits"

Archero 2 #4

Position 5: Gameplay / Board (dice)

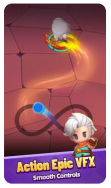

Source	recapture our position 4
Screen to capture	One full-screen capture of the green grassland board (the one with the skeleton-king statue) mid-run, with the hooded player token on the tile loop, the dice rolling and a chest and a ghost tile nearby. Do not use the three stacked diagonal slices (portrait)
Action	The player rolls the dice and the token moves toward a treasure chest along the tile loop
Atmosphere	Cheerful, colourful, adventurous cartoon fantasy
Main colours	grass green #7cc244, stone grey #c9c3b0, desert orange #e08a3c, purple #7a4fc4, navy #2a327e
Layout	full screenshot, small layer
Background mask	diagonal band, orange #f08a2a over a dark navy underband #232a63, bottom

Text	Role	Colour	Outline	Font style	Size	Position
EVERY ROLL, NEW ADVENTURE!	headline	yellow #f7e51c (EVERY ROLL) and white #ffffff (NEW ADVENTURE!)	black #000000	heavy rounded sans, bold, slightly tilted	huge	bottom
Roll the dice, grab the loot	subheadline	white #ffffff	dark navy #232a63	heavy rounded sans, bold italic	medium	bottom

- **Extra element:** purple-haired cat-eared girl hero in a red kimono raising a katana, at bottom right, over the band, pose bust, facing the viewer, sword raised, determined, purple, red, white, black

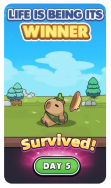

Why: Follows the strong pattern that position 5 is gameplay (2 of 2 competitors). The recapture replaces the large-layer collage with the more common full screenshot and small layer, and it shows our unique board-and-dice hook clearly.

Competitor examples:

Gameplay / Travel exploration: "Action Epic VFX"

Archero 2 #5

Gameplay / Victory: "LIFE IS BEING ITS WINNER"

Capybara Go #5

Gameplay / Defeat: "DON'T WORRY, BE HAPPY"

Capybara Go #4

Position 6: Feature image / Character showcase

Source	new capture
Screen to capture	Art screen (may be shown in the game). Pure art composed only from existing assets, each character in the pose already used in our current screenshots: the dark blue cavern with cyan crystals, cropped from the title key art, as the backdrop; the stone golem cut-out from our boss screenshot (front-facing, hunched, looming) large in the upper background; the elf warrior cut-out from our battle screenshot (lunging forward with sword extended) in the centre; the ice crystal dragon cut-out from our pets screenshot (head and forelegs, snarling) at the lower left; and the katana girl bust from our board screenshot (sword raised) at the lower right. No new poses or new character illustrations are needed (portrait)
Action	The elf lunges toward the viewer with his sword out, flanked by the snarling ice dragon and the katana girl, while the rune golem looms behind them
Atmosphere	Heroic, adventurous and cute, with a warm golden light burst breaking into the dark cavern
Main colours	dark navy #1c3358, glowing cyan #3ee6f0, golden yellow #f7c93a, red #d63a2a, ice blue #7fd8f5
Layout	full-screen art (title / loading style)
Background mask	band, dark navy #1e2a5a, top

Text	Role	Colour	Outline	Font style	Size	Position
RISE AS A LEGEND	headline	white #ffffff (RISE AS A) and golden yellow #f7b731 (LEGEND)	dark navy #1e2a5a	heavy rounded sans, bold italic, 3D outlined	huge	top
Heroes, pets and monsters await!	subheadline	white #ffffff	dark navy #1e2a5a	bold rounded sans, italic	medium	top

- **Extra element:** dark blue stone golem with glowing red eyes, cyan runes and pink cracks (existing cut-out from our boss screenshot), at upper middle, directly under the top band, about 60% of the image width; back layer, behind all other characters and the light burst, slightly darkened, pose front-facing, hunched, looming toward the viewer (as evidenced), dark navy #1c3358, cyan #3ee6f0, red eyes #e03a2a, pink cracks #e87ab0
- **Extra element:** golden light burst with sparkles, at middle, centred behind the elf; layered in front of the golem and behind the three front characters, pose n/a, radial rays, golden yellow #f7c93a, white #ffffff
- **Extra element:** white-haired elf warrior with a silver sword (existing cut-out from our battle screenshot), at centre to lower middle, about 45% of the image height; front layer, the focal character, with a white outline, pose lunging forward with the sword extended (as evidenced), white hair, tan skin, red-brown armour, silver sword, purple scarf, white outline
- **Extra element:** ice crystal dragon pet with antlers and whiskers (existing cut-out from our pets screenshot), at bottom left, cropped by the bottom and left edges, about 40% of the image width; front layer, partly overlapping the elf's back leg, pose front-facing and snarling, head and forelegs only (as evidenced), light ice blue #7fd8f5, white, dark blue outline
- **Extra element:** purple-haired cat-eared girl in a red kimono with a katana (existing bust cut-out from our board screenshot), at bottom right, cropped by the bottom and right edges, about 40% of the image width; front layer, slightly in front of the elf's sword arm, pose bust, facing the viewer, sword raised, determined (as evidenced), purple hair, red kimono #d63a2a, white, black

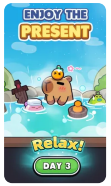

Why: Fills our biggest gap: both competitors use a feature image, always after gameplay. Like Archero 2's position 6, it is a character showcase with a top band. It uses only existing character cut-outs in the poses already seen in our screenshots, so no new illustration is needed, and it keeps the companion appeal of the dropped pets screen.

Competitor examples:

Feature image / Character showcase: "Get Stronger or Start Over"

Archero 2 #6

Feature image / Feature callout: "ENJOY THE PRESENT"

Capybara Go #3

Feature image / Character showcase: "LIVING IS FORTUNE"

Capybara Go #2

Cross-check of the recommendations

Verdict: changes requested (the recommendations above were revised after this review).

- **Major**, position 6: The new feature image is not fully grounded in the available assets and its layer specification omits its four principal characters. The readings only show the elf facing a golem, a bust of the katana girl, the dragon's head and forelegs, and the golem in existing poses; they do not establish assets for a back-to-back composition, a curling dragon, or the specified group poses. Only the light burst is enumerated under marketing-layer elements. Suggestion: Use the characters in their evidenced poses, or explicitly require new character illustrations rather than claiming the image is built from existing assets. List the elf, katana girl, dragon, and golem separately under elements, each with precise position, pose, scale, layering, and colours.
- Minor, position 3: The rationale says the skill-pick screen is something “both competitors use,” but the supplied evidence only establishes gameplay/feature-image categories at position 3 and does not show that both competitors use a skill-selection screen. Suggestion: Justify this position as a strong, game-specific roguelike hook and note that gameplay appears at position 3 in one of two competitor decks; remove the unsupported claim about both competitors.
- Minor, position 5: The requested grassland-board moment is more specific than the readings support. They confirm that the montage contains the grassland board and, across its three levels, dice, chests and ghosts, but not that the grassland board can show a rolling die, moving token, nearby chest and nearby ghost tile simultaneously. Suggestion: Verify that this exact state can be captured in-game, or loosen the brief to a single grassland-board frame with the token moving toward a clearly visible reward or encounter tile.
- Minor, position 5: The small bottom layer is underspecified spatially and risks overcrowding: a long huge headline, medium subheadline, and large character are all assigned only to “bottom,” without exact stacking, alignment, bounds, or safe-area guidance. The same ambiguity recurs at positions 2–4. Suggestion: For positions 2–5, specify headline and subheadline alignment, vertical order, approximate canvas bounds or percentages, line breaks, and the character's maximum width/overlap. Consider shortening this headline or dropping the subheadline to preserve gameplay visibility.

5. Store text and keywords

No store text is saved for these games yet. It is read (free, no AI) by the next preview, or for the pages already downloaded with `npm run store-text`.

6. Detailed statistics

From **11** competitor screenshots of 2 games (Archero 2, Capybara Go). Deck length 5 to 6 (median 5.5). Marketing layer on 100% of images.
